

ABSTRACT OF THE DISCLOSURE

A power distributed 2-range transmission comprising one frictional wheel variator (1), one planetary gear (2) arranged coaxially to the frictional wheel variator (1), detachably connectable therewith via one shifting element (K2) and comprising two shifting elements (Kr, K1) and one lateral shaft (9) which connects the frictional wheel variator (1) with the planetary gear (2), the planetary gear (2) containing two minus planetary gear sets (3, 4).
